

Embedded Orchestration for SaaS

Shuttle — The Payments Marketplace

- For Software Vendors
- For Financial Service Providers
- For Merchants

Literally, the most influential
person in payments that you've
never heard of.

shuttleglobal.com

Four Types of SaaS

Not payment enabled.

Typically invoice feature.

Thinks that payments happens outside of the platform.

B2B Customers.

Marketplace

Merchant of Record or Master Merchant.

Can only work with certain PSPs.

% of volume / payment fees

Target all merchants, like to move up market.

All in one.

Single Payment Provider.

Payfac / Embedded Finance / Reselling payments.

Business model based on payment fees.

Target micro / SME merchants.

fresha

Payment app store/choice.

Integrating gateways to win merchants.

Subscription model.

Target all merchants, like to move up market.

Online shops

Booking/Ticketing/Registration

Invoicing

Subscriptions/Billing

Communications :)

Everything's a Shop

THANKS SOFTWARE!

More sales channels
=
More sales

The chance to sell everywhere and through everything has never been greater.

THANKS SOFTWARE!

Multiple sales channels
=
More sales

The chance to sell everywhere and through everything has never been greater.

But there's a problem

The truth is...

Software vendors are building poor FS experiences. But why?

What do merchants want?

What do FS providers want?

An Onboarding UI

A Connection UI

A Checkout

An Express Checkout

Basic Workflows & Routing

Views of transactions

Payment Activity

**Intelligent service
recommendation**

Choice of providers

Qualified deal flow

Connected services

Fully featured services

Marketing opportunities

Fewer parties to manage

**Everybody is building the
same payment integration
over and over again.**

**Trying to monetize vs
minimal effort & risk.**

**Little no payment features
that add value.**

**If you don't have an
scalable ISV strategy, you're
dead.**

Thanks

The most influential person
in payments that you've
never heard of.
